

DID YOU KNOW THAT...

...switching to a compact fluorescent light (CFL) bulb can save as much as \$108 (EC) over the bulb's lifetime?*

...installing "smart" power strips reduces energy loss from electrical equipment, which occurs even when turned off?

...speeding, hard braking and rapid acceleration can lower your gas mileage?

Become a Power Saver.

The Organisation of Eastern Caribbean States (OECS) Secretariat wants to help you save energy and money. To make it easy for you, the OECS has launched Power Savers—The Power Is in Your Hands.

Power Savers can show you how to make simple energy-efficient improvements in your home or at your business that can add up to big savings on your energy bill. Whether you own or rent your home or are a business owner or operator, this public education and awareness campaign can help you conserve energy, save money and protect the environment. Power Savers is funded by the Caribbean Development Bank.

What is energy efficiency?

Energy efficiency means getting the same level of service while using less energy. At home, if you replace your refrigerator with a more energy-efficient model, the new appliance will provide the same amount of cooling but use less power. Or, at your business, replace office equipment such as computers and printers or your AC and lighting systems, and the new equipment will operate just as efficiently— if not even better—but use less power. This will lower your energy costs and continue to save you money over the lifetime of the appliance or equipment.

Join the energy efficiency movement.

As a power saver, you have control over the amount of energy you use. You can take steps to save energy when and where it makes the most sense. Whether it's turning off lights when leaving a room, unplugging power chargers that are not in use or replacing an old inefficient electrical appliance, the power to save is up to you.

THE POWER TO SAVE IS IN YOUR HANDS.

Get started today!
